

CSci 427 Homework 6

Due: 5:00 pm, Wednesday, 3/20

Eric Shih

This homework took me around 25 hours to complete. Scene 8 is not completely correct and scene 9 is not correct at all. The reflection color for scene 8 is not fully there, meaning that the color that is being multiplied is not correct. The recursion for scene 8 is done in a while loop instead of true recursion, this was simply because I thought it was easier to implement. In scene 9, evaluation is not totally correct.
